SRN: PES1UG24CS279 | Name: Mudit Chaturvedi

Problem Statement #33 — Micro-Lending & Peer Credit Risk Assessor

Jira site: mudit300477.atlassian.net

Project: **Scrum_BPS#33** | Key: **SBPS33** (company-managed Scrum)

Template: Software Development — Scrum | Board: SBPS33

## 1. Scrum project (repeat of Kanban structure)

The same Lab 1 requirements were recreated in a Scrum template project named Scrum_BPS#33 (key SBPS33). Work types: 7 Epics, 7 Stories (use cases), 7 Tasks and 7 Sub-tasks (SBPS33-1 … SBPS33-28).

## 2. Backlog, epics and Fibonacci story points

Stories were estimated with Planning-Poker style Fibonacci points based on complexity, uncertainty and test effort: FR-001 = 8, FR-002 = 5, FR-003 = 5, FR-004 = 5, FR-005 = 5, NFR-001 = 8, NFR-002 = 8 (total 44 points). Sprint 2 committed 26 of those points (FR-004, FR-005, NFR-001, NFR-002).

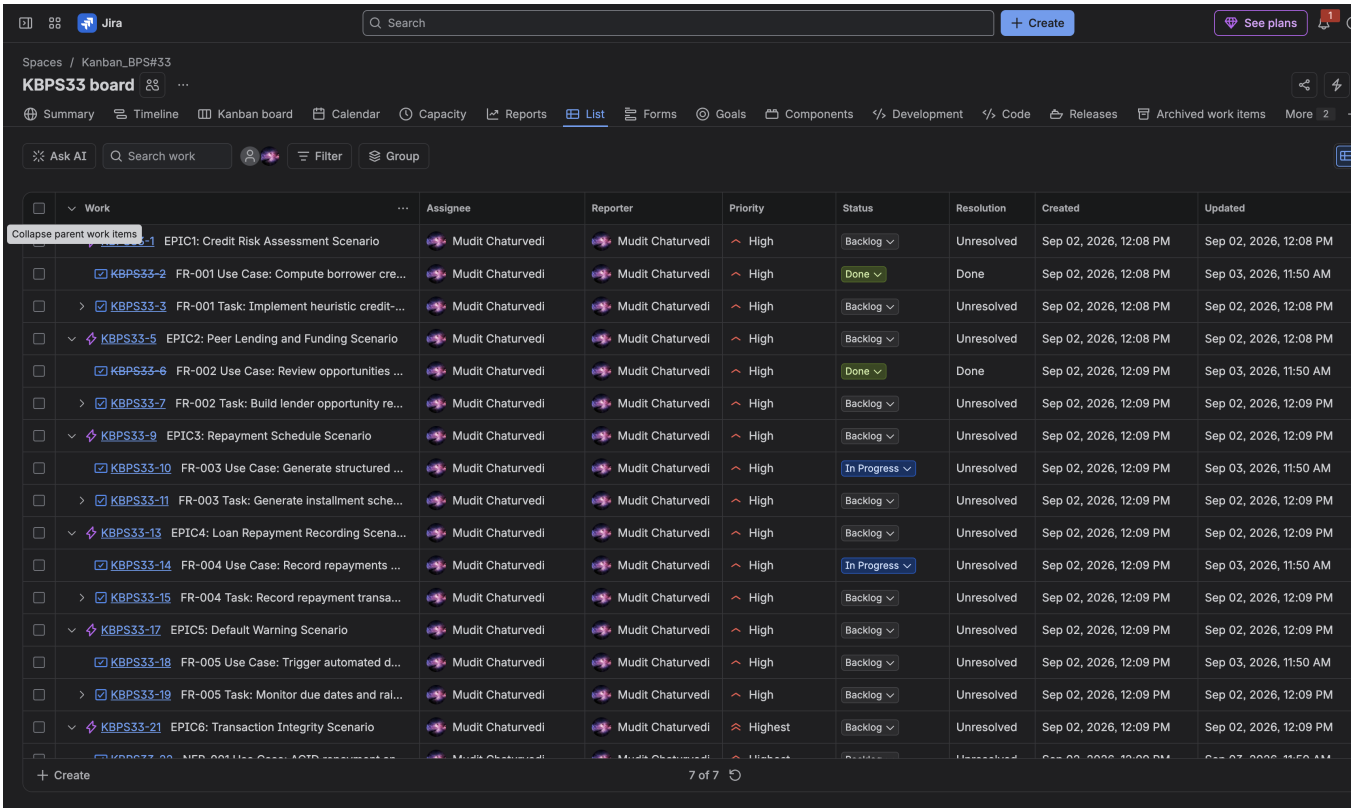

**Figure.** Scrum backlog: Sprint 2 (8 Sep–15 Sep) with epic labels, statuses, and story-point estimates (5 and 8) on FR/NFR use-case stories.

## 3. Sprint simulation (two sprints)

**Sprint 1** (1 week, 1–8 Sep 2026, now closed): goal — deliver FR-001 credit-risk rating, FR-002 peer funding, and FR-003 repayment schedule. Stories SBPS33-2, SBPS33-6 and SBPS33-10 were completed (Done). **Sprint 2** (1 week, 8–15 Sep 2026, active then completed in simulation): goal — repayment recording, default warnings, and NFR integrity/security. Work was moved To Do → In Progress → Done on the Active Sprints board.

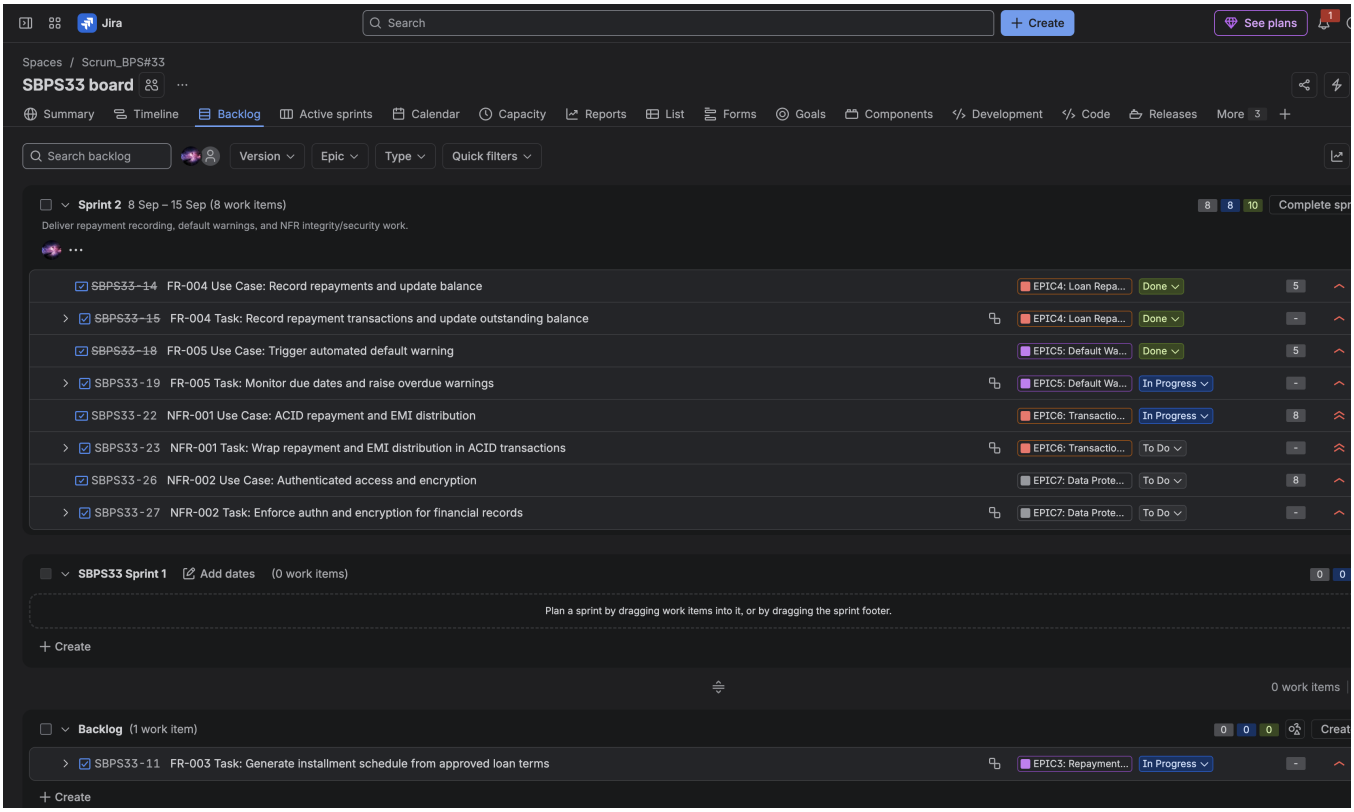

**Figure.** Active Sprint view (Sprint 2): stories and sub-tasks progressed into Done after the simulated sprint workflow.

## 4. Burndown chart

Reports → Burndown Chart, estimated in Story Points. The grey guideline is ideal linear progress; the remaining-values line tracks unfinished points. Sprint 2's chart is flatter than a real team week because story points were applied after sprint start, so the start-of-sprint remaining value logged as 0 and later completions appear as scope/estimate updates. That itself is a useful lab insight: estimates must be on the stories before Start sprint, otherwise burndown cannot show a classic downward slope.

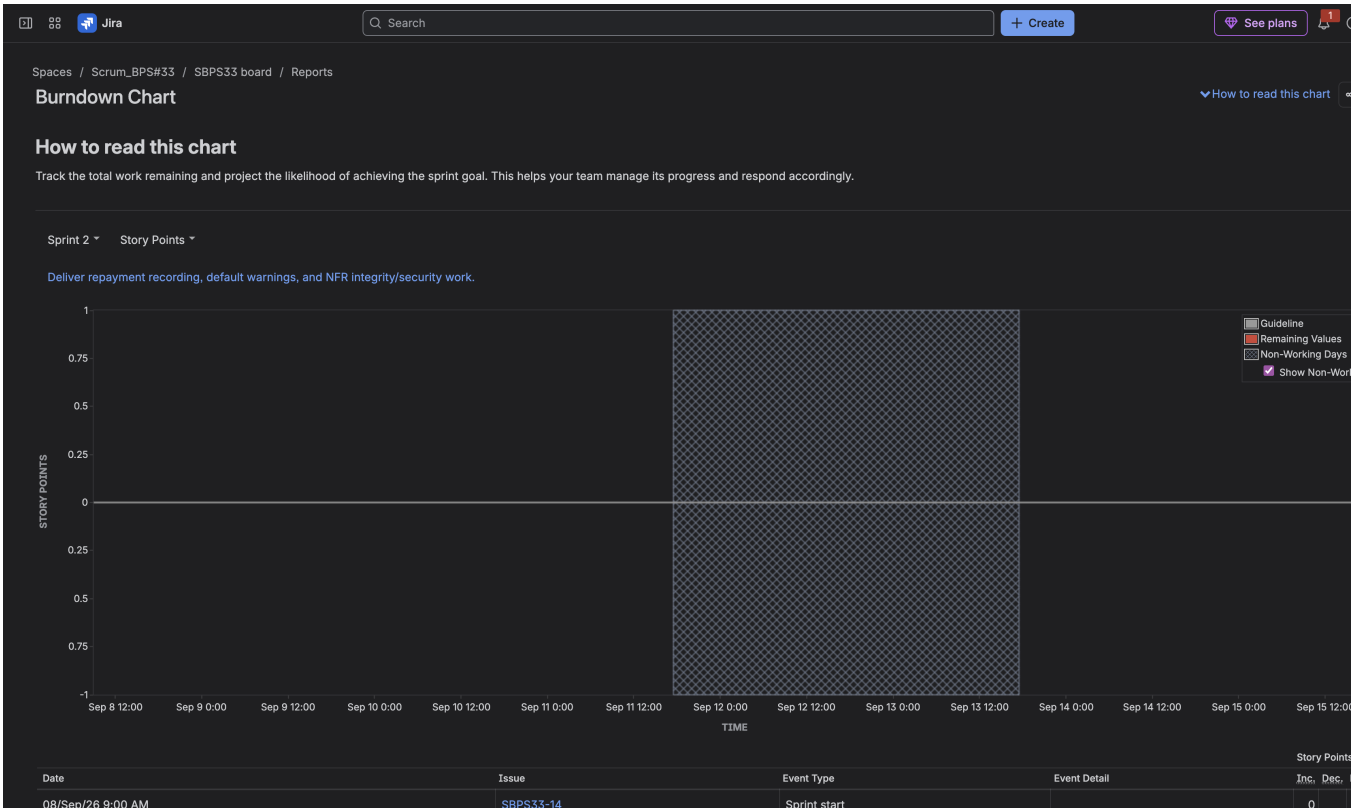

**Figure.** Sprint 2 burndown (Story Points): time axis 8–15 Sep, sprint goal shown, events table listing SBPS33-14 and related items.

## 5. Reflection questions

### 1. Did your estimations reflect the actual effort?

In this simulated sprint the Fibonacci values were relative, not calendar hours. Credit-risk heuristics and ACID/security work (8 points) are genuinely harder than recording a repayment (5). Because the lab compressed a week of work into minutes, the numbers overstate elapsed time but correctly rank uncertainty. Next time we would split any 8-point story before committing it.

### 2. Was your backlog well-prioritized?

Yes. High-value lender/borrower FRs (risk rating, funding, schedule) went into Sprint 1. Recording, warnings, ACID and encryption followed in Sprint 2. That matches user impact: you cannot repay or warn if you cannot score and fund a loan first.

### 3. How did your simulated sprint align with your plan?

Sprint 1 delivered the three planned FR stories. Sprint 2 contained the remaining FR/NFR stories and was moved to Done on the board. One leftover FR-003 task remained in the product backlog, which is realistic incomplete spillover rather than hiding unfinished work inside a closed sprint.

### 4. What insights did the burndown chart give about your team's capacity?

A flat remaining-values line at zero at sprint start means the team did not have a trusted baseline velocity. If a real team always finishes early, they under-committed; if the red line stays above the guideline, they over-committed. For this lab, the chart mainly showed that capacity cannot be read until story points exist at sprint start. That is the operational takeaway for the next sprint planning session.

## 6. Epics summary (handout deliverable)

EPIC1 Credit Risk Assessment; EPIC2 Peer Lending and Funding; EPIC3 Repayment Schedule; EPIC4 Loan Repayment Recording; EPIC5 Default Warning; EPIC6 Transaction Integrity; EPIC7 Data Protection. Each

epic’s stories carry the story-point totals listed above.
